Temporary Handwash Station

1. Fill a container that has a spout or dispensing valve with warm water that is at a comfortable temperature for washing your hands. An insulated container will help to maintain the water temperature. **The dispensing valve should be able to remain open during the handwashing procedure.**
2. Provide a pump dispenser of antimicrobial soap. Hand sanitizers can not be substituted for soap but can be used in addition to soap.
3. Provide single use paper towels for drying hands.
4. Provide a bucket or other receptacle for collecting the water as hands are washed. This waste water is to be disposed of in a public sewer or septic system. Do **NOT** pour this water into a storm drain or side ditch.
